

# Four In A Row

For 2 Players

## CONTENTS

Bamboo Playboard, 36 colored bamboo balls. (18 red & 18 green)

## OBJECTIVE

Try to build a row of four colored bamboo balls while keeping your opponent from doing the same. Building four in a row vertically creates quite a challenge: you must think in a whole new way to block your opponent from creating four in a row!

## TO BEGIN

Assemble the grid by removing the 2 bamboo pins from the side of the game tray. Pull up the grid piece and place it vertically inside the game tray and attach the bamboo pins through the holes to secure the grid to the tray.

## HOW TO PLAY

1. Decide who will go first. Players will alternate turns after dropping a bamboo ball into the grid.
2. On your turn, drop one of your balls down any of the slots in the top of the grid.
3. Play alternates until one player gets FOUR balls of his/her color in a row. The FOUR in a row can be horizontal, vertical or diagonal.

## HOW TO WIN

Be the first player to get FOUR of your colored bamboo balls in a row, you win the game
